

Hier, dans une note dans laquelle il était également question de mots de billard, était fournie la définition d'un mot de Christoffel. C'est un mot sur un alphabet de deux lettres qui "colle au plus près" à une courbe (par le dessus ou par le dessous). Voyons des exemples :

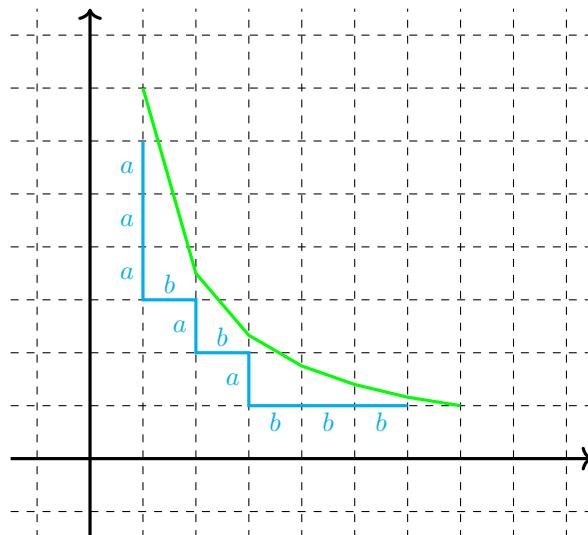

- mot de l'hyperbole discrétisée associé à $n = 4$: $aabb$.

- mot de l'hyperbole discrétisée associé à $n = 5$: $aababb$.

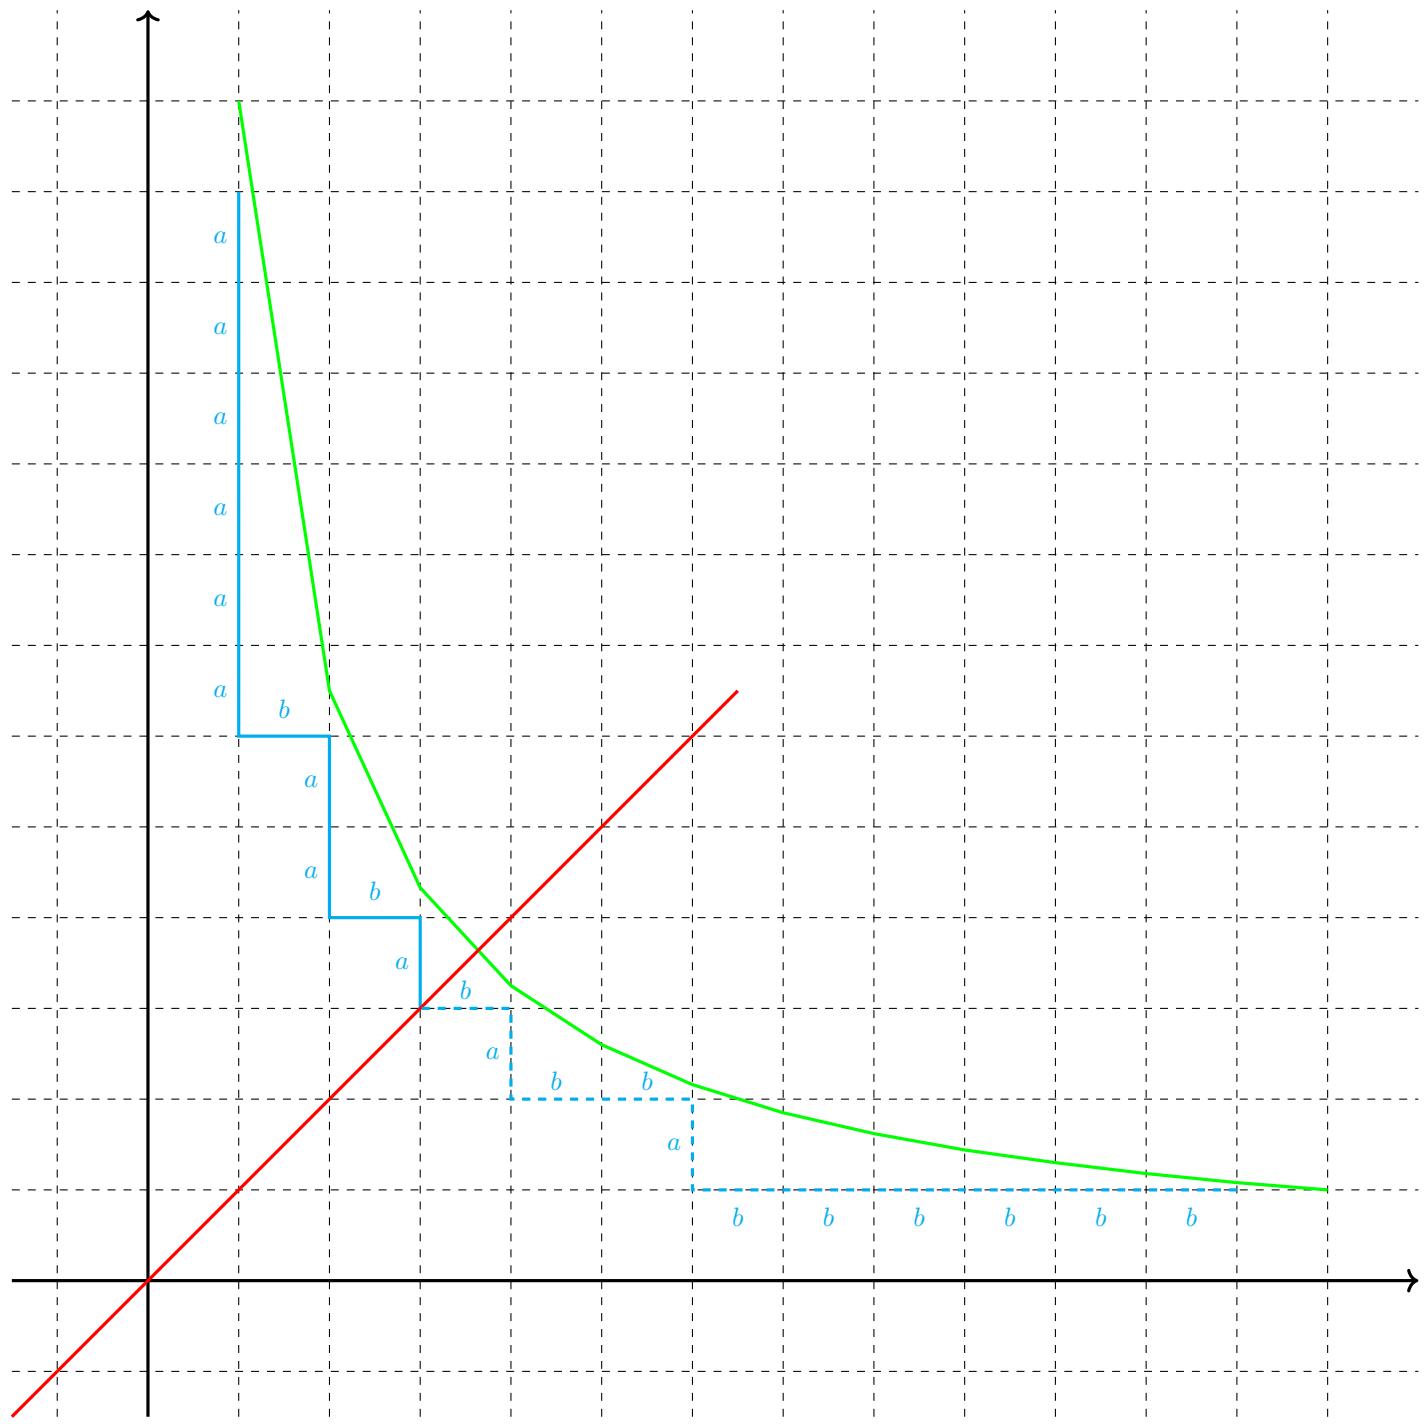

- mot de l'hyperbole discrétisée associé à $n = 7$: $aaabababbb$.

Du fait de la symétrie des hyperboles, qui se traduit en mot par le fait que les mots sont de longueur paire et ont leur fin symétrique de leur début à inversion des lettres près, on ne conserve comme mot associé à un nombre que le début des mots présentés ici (un mot de $n - 2$ lettres pour caractériser n ; on montre cette symétrie sur le dernier graphique ci-dessous par la diagonale rouge et la fin du mot en pointillé).

- mot de l'hyperbole discrétisée associé à $n = 13$: aaaaaabaaba.

On calcule par programme les mots des 100 premiers entiers naturels, à la recherche de régularités.
